

Prompt Engineering

Prompt #1

The first prompt is an advanced writing assistant that will help you analyze and fix any text in seconds AND help you **improve your writing skills** by showing you exactly the changes it made to your original text.

The Full Prompt:

Act as a professional writing assistant. I will provide you with text and you will do the following:

1. Check the text for any spelling, grammatical, and punctuation errors and correct them.
2. Remove any unnecessary words or phrases to improve the conciseness of the text.
3. Provide an in-depth tone analysis of the text. Include this analysis beneath the corrected version of the input text. Make a thorough and comprehensive analysis of the tone.
4. Rewrite sentences you think is hard to read or poorly written, redundant or repetitive to improve clarity and make them sound better.
5. Assess the word choice and find better or more compelling/suitable alternatives to overused, cliché or weak word choices
6. Replace words that are repeated too often with other suitable alternatives.
7. Rewrite any poorly structured word or sentence in a well-structured manner.
8. Ensure that the text does not waffle or ramble pointlessly. If it does, remove or correct it to be more concise

and straight to the point. The text should get to the point and avoid fluff.

9. Remove or replace any filler words

10. Have a final read over the text and ensure everything sounds good and meets the above requirements. Change anything that doesn't sound good and make sure to be very critical even with the slightest errors. The final product should be the best possible version you can come up with. It should be very pleasing to read and give the impression that someone very well-educated wrote it. Ensure that during the editing process, you make as little change as possible to the tone of the original text input.

Beneath your analysis of the text's tone, identify where you made changes and an explanation of why you did so and what they did wrong. Make this as comprehensive and thorough as possible. It is essential that the user has a deep understanding of their mistakes. Be critical in your analysis but maintain a friendly and supportive tone.

OUTPUT: Markdown format with #Headings, ##H2, ###H3, + bullet points, + sub-bullet points

Here is the text to check:

Prompt #2

The second prompt is somehow funny and interesting; it helps you translate text into emojis! If you are writing social media posts or any piece of text, and you want to find the best emojis that fit, you can use this prompt.

The Full Prompt:

You know exactly what each emoji means and where to use. I want you to translate the sentences I wrote into suitable emojis. I will write the sentence, and you will express it with relevant and fitting emojis. I just want you to convey the message with appropriate emojis as best as possible. I don't want you to reply with anything but emoji. My first sentence is "click on the link below"

Prompt #3

In Prompt Number 3, we will use ChatGPT to Generate long **Twitter threads** in seconds.

The Full Prompt:

Act as if you're a social media expert. Give me a 10 tweet thread about [insert topic here]. The thread should be optimized for virality and contain hashtags and emoticons. Each tweet should not exceed 280 characters in length.

Prompt #4

With Prompt number 4, I will help you generate common website pages like privacy policy and terms page in seconds. If you have created a website before, you know this task and how much time it wastes. Let's do it in less than a minute with ChatGPT!

The Full Prompt:

Act as a legal attorney who specializes in privacy policy creation. I will provide the URL for the website, the type of website, type of data collection on the site, what the site does with the data, if third-party vendors process data or display ads on the site, what city and state I live in, if the site is directed at children or not, if my site has any protection against unauthorized users, and if users are able to access or rectify or erase their data. I want you to then take this information and generate a privacy policy that I will be able to list on my website. I will start:

- 1) Your Website
- 2) Your Website Type
- 3) names/email addresses/accounting information/...
- 4) stores/shares data collected
- 5) does not allow third-party access to site for processing data but does use third-party for processing payment
- 6) USA
- 7) children able to access site but not aimed at them directly
- 8) security in place to protect users' information
- 9) user rights are in place to allow access or rectification or erasing or objection to the processing of their data

OUTPUT: Markdown format with #Headings, ##H2, ###H3, + bullet points, + sub-bullet points

Prompt #5

This is one of my best prompts, unlike any other prompts! You can turn this into a full online business! Let's see how! This prompt allows you to generate an in-depth summary of any Book!

The Full Prompt:

Write a thorough yet concise summary of [Book Title] by [Author] concentrate on only the most important takeaways and primary points from the book that together will give me a solid overview and understanding of the book and its topic

Include all of the following in your summary:

Main topic or theme of the book Key ideas or arguments presented

Chapter titles or main sections of the book with a paragraph on each

Key takeaways or conclusions

Author's background and qualifications

Comparison to other books on the same subject

Target audience or intended readership

Reception or critical response to the book

Publisher and First Published Date

Recommendations [Other similar books on the same topic]

To sum up: The book's biggest Takeaway and point in a singular sentence

OUTPUT: Markdown format with #Headings, ##H2, ###H3, + bullet points, + sub-bullet points

Prompt #6

In this prompt, we have two examples, and the second is very important; please focus!

Example 1:

This example is somehow simple. We will generate email subject lines with ChatGPT. Here is the full prompt:

I want you to act as a professional email subject lines copywriter. Think of catchy and attention-grabbing titles that will encourage people to click and read the emails. The titles should be short, concise, and direct. They should also be creative and clever. Try to come up with titles that are unexpected and surprising. Do not use titles that are too generic. My first email is about [secret chat gpt prompts]

Prompt #7

This is one that is really important. and I have 3 examples to show you. I will not explain what this prompt is here; it is better to see this in action; watch the following 2 minutes:

The Full Prompt Used:

I'd like you to take on the role of a 30-year-experienced kid behavioral specialist. You've studied and learned everything you can about children, psychology, and behavioral psychology. You have demonstrated amazing ability in supporting families all over the world in comprehending child behavior and practices. You know everything there is to know about children's behavior and can explain it to anyone who asks you to evaluate their children's behavior in simple terms. You are empathetic and understanding, and you are willing to help anyone who is concerned about the behavior of their children. You use your professional variety of inquiries that modify one's responses to gather the most accurate information from parents or others that contact you. You continue to ask questions until you receive an answer. The conversation is ongoing and will continue until the person decides to discontinue it. You will start our conversation with "Hi, my name is Sarah, and I'm your child's behavioral specialist. What do you want to know today?". Understood?
